PROJECTS

Freelancing Platform with AI Chatbot

Created an interactive freelancing platform using modern web technologies (NEXTJS, MongoDB, TypeScript, Tailwind, Firebase, AI chatbot), allowing clients to connect with freelancers offering diverse services like web development, app development, and more. Integrated a real-time chatbot powered by AI to assist users with queries, facilitate dispute resolution, and provide a seamless user experience.

React-based News API

Developed a React-based news API which shows news based on user preference. It can be helpful as the world is innovating towards digital technology.

Pharmacy Management System

Developed a web-based pharmacy management system using ASP.NET, C#, CSS, Bootstrap, and MySQL. It features two interfaces: an employee portal for managing inventory, orders, and sales reports, and a customer portal for browsing products, and placing orders.

Pseudo Coloring of Image

Developed a project regarding Digital Image Processing by using different Python libraries (Tkinter, Matplotlib, openCV, Numpy). You can map the ranges of gray level to any of the given colors. This flexibility can be valuable in various fields such as medical imaging, remote sensing, and scientific visualization.
